

DAYA DAN TEKANAN

FORCE AND PRESSURE

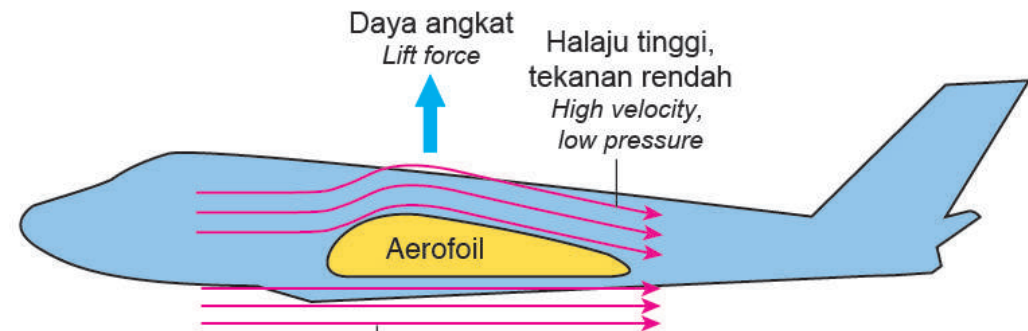

Prinsip Bernoulli *Bernoulli's Principle*

menyatakan bahawa apabila halaju aliran sesuatu bendalir bertambah, tekanan dalam bendalir itu akan berkurang. Sebaliknya, apabila halaju aliran sesuatu bendalir berkurang, tekanan dalam bendalir itu bertambah.

states that when the velocity of a fluid increases, its pressure decreases, and when the velocity of the fluid decreases, its pressure increases.

Halaju air bertambah, tekanan berkurang
Velocity of water increases, pressure decreases

Halaju rendah, tekanan tinggi / *Low velocity, high pressure*
